SUMMARY

Results-driven DevOps engineer with 12 years of experience and a strong track record implementing agile methodologies for financial product development. Passionate about driving continuous improvement and leveraging automation to enhance efficiency in dynamic environments.

TECHNICAL SKILLS

Infrastructure as Code & Configuration Management: Terraform (HashiCorp Certified: Terraform Associate), Ansible

AI / DevOps Automation: Custom MCP (Model Context Protocol) server

Scripting: Groovy, PowerShell, Shell, Python

Languages: Java, HTML, CSS

Databases: Microsoft SQL Server, MySQL, Oracle

Cloud (AWS): EC2, S3, VPC, Route53, RDS, Elastic Load Balancer, EKS, Lambda, EMR, CloudWatch, CloudFormation, ECR, IAM

Containerization / Orchestration: Docker, Kubernetes, Helm

CI/CD & DevOps Tools: Jenkins, Bamboo, CloudBees, GitLab, GitHub, Bitbucket, SVN, Liquibase, Postman

Monitoring & Logging: Prometheus, Grafana, ELK, OpenSearch, Splunk, Nagios, SONAR

Artifact & Build Management: Nexus, Artifactory, Maven, Gradle, MSBuild, npm

Application Servers: JBOSS, WebLogic, IIS, Tomcat, Nginx

Operating Systems: RHEL, CentOS, Windows Server

Collaboration: Jira, Confluence

PROFESSIONAL EXPERIENCE

Principal Platform Engineer

Instinet: Nomura Services India Private Limited

May 2021 – Present

London, UK (Remote)

- Adopted **Terraform** alongside **Ansible** within GitLab CI/CD pipelines to provision and manage server infrastructure as code, strengthening configuration management, consistency, and repeatability across environments.
- Built custom **MCP (Model Context Protocol)** servers integrating **GitLab**, **Jira**, and **Confluence** with AI coding assistants, enabling automated issue triage, documentation lookup, and pipeline insights.
- Led a 6-month, enterprise-wide migration of Instinet's GitLab, Jira, Confluence, and Nexus platforms to Nomura, personally migrated 20+ applications and building reusable templates that enabled 60+ teams to self-serve migration across 200+ applications cutting licensing and infrastructure costs by ~50%.
- Integrated Jenkins Deploy into the existing GitLab CI pipeline to support the self-service migration runbooks used by those teams.
- Migrated business-critical applications like **GitLab** from monolithic architecture to containerization, achieving seamless transitions and minimizing application downtime to less than 10 minutes.
- Implemented GitLab Geo for disaster recovery, ensuring high availability and data replication across multiple locations, safeguarding the platform from potential outages.
- Spearheaded the removal of over 30+ redundant servers through a comprehensive infrastructure assessment and consolidation strategy, resulting in a 62% reduction in infrastructure costs.
- Automated GitLab deployment pipelines, reducing manual errors by 80% and speeding up releases. Configured GitLab Runners on Kubernetes using **Helm** for scalable CI/CD.
- Pioneered **Docker** containerization and orchestrated **Kubernetes** deployments, driving enhanced scalability and resource optimization.
- Improved a **Java**-based trading platform's build time across multiple regions from 80 minutes to approx. 5 minutes through the successful implementation of a **Gradle** build cache node.
- Implemented comprehensive **monitoring** and **alerting** using **Prometheus** and **Grafana** for system metrics, and deployed **OpenSearch** with **Filebeat** and **Logstash** for centralized log monitoring, enabling proactive issue detection and faster troubleshooting.
- Created lightweight **FastAPI**-based microservices to expose internal DevOps tools and metrics, improving accessibility and automation.

- Administered **Jira** and **Confluence**, migrating both applications to Docker and deploying them on a Kubernetes cluster, enhancing system scalability and reducing maintenance overhead by 60%.

Senior DevOps Engineer

BNP Paribas India Solutions

October 2018 – March 2021

Mumbai, India

- As a core team member of Insite DevOps at BNP Paribas, spearheaded the DevOps transformation and assisted application teams in adopting best practices, significantly enhancing overall project efficiency.
- Used **Bash** and **Python** with **Boto3** to supplement automation provided by **Ansible** for tasks such as encrypting EBS volumes backing AMIs and scheduling Lambda functions for routine AWS tasks.
- Improved build and deployment efficiency by 40% through implementation and maintenance of efficient CloudBees **Jenkins** pipelines for a diverse range of applications, including Java, .Net, Angular, and Node projects.
- Integrated **Liquibase** into the **Jenkins** pipeline to manage database schema revisions, resulting in streamlined database changes.
- Implemented **Cobertura** and **JaCoCo** code coverage analysis, achieving 95% coverage across all applications, and integrated a **Selenium** test suite with the Jenkins pipeline to automate application testing and ensure high-quality, bug-free code.
- Enhanced issue tracking and traceability by incorporating Atlassian **Jira** and **Bitbucket** into the Jenkins pipeline, while achieving a 30% reduction in system downtime through **Blue-Green** deployment.

DevOps Engineer

Propellum Infotech Private Limited

June 2017 – August 2018

Mumbai, India

- Implemented robust CI/CD pipelines for **Android**, **iOS**, **PHP**, and React Native applications, reducing deployment time by 50%.
- Migrated **Bamboo** from H2 DB to MySQL DB and optimized deployment, ensuring data integrity and seamless pipeline continuity with a 30% rise in deployment efficiency.
- Set up an **ELK** stack to monitor server logs, enabling proactive issue detection and reducing incident resolution time by 20%.
- Implemented a **LAMP** server for PHP applications, achieving 99.9% uptime and ensuring a stable production environment.
- Utilized various **AWS** services to deploy scalable and cost-effective infrastructure.
- Wrote **Ansible** playbooks and modules to manage servers, automating processes and saving 25% of manual effort.

Associate DevOps Consultant

Capgemini India Pvt Limited

May 2015 – July 2017

Mumbai, India

- Managed **AWS** infrastructure to ensure high availability, scalability, and security.
- Implemented custom **Maven** goals to streamline the build process and improve project-specific requirements.
- Migrated on-premises Jenkins, **SONAR**, and **Tomcat** servers to IBM Bluemix, reducing infrastructure overhead and enhancing cloud capabilities, while installing and configuring **Nagios** for proactive monitoring of network bandwidth, memory usage, and hard drive status.

Software Engineer

Saint-Gobain India Pvt Limited

January 2014 – May 2015

Mumbai, India

- Configured **Nexus** for efficient artifact management, enhancing build speed and reliability, and conducted a seamless SCM migration from SVN to GitHub, preserving full revision history.
- Created **SQL** queries and utilized JDBC templates for efficient data retrieval and streamlined database access, reducing development time.
- Implemented Java action classes using the specified framework, enhancing application functionality.

EDUCATION

Bachelor of Engineering (Computer Engineering)

University of Mumbai

May 2008 – June 2012

Mumbai, India
